Backend & AI Engineer

Java Backend Engineer and Backend Technical Lead with experience building **REST APIs, asynchronous services, cloud-integrated workflows, and AI-enabled backend systems**. Experienced in **Java, Spring Boot, Python, SQL, AWS, Azure, data platforms, and API integrations**. Currently leading a **5-member backend team** while working across backend architecture, AI engineering workflows, cloud infrastructure, deployment, and customer integrations.

Technical Skills

Languages	:	Java, Python, SQL
Backend	:	Spring Boot, REST APIs, HTTP, JSON, JDBC, API Integration, API Validation, API Versioning, Pagination, Error Handling, Asynchronous Processing, Multithreading, Stateless Services
AI / ML	:	AI API Integration, Agent Red Teaming, AI Security Testing, AI Evaluation Workflows, SDD, Python Automation, RAG / Vector Search Concepts, Prompt Engineering
Databases	:	MySQL, PostgreSQL, SQL, Query Optimization
Data Platforms	:	Snowflake, Databricks, Pinecone, OpenSearch
Cloud	:	AWS S3, AWS Secrets Manager, Azure Key Vault, Azure Blob Storage
Security	:	RSA, SHA, API Authentication, AI Red Teaming
DevOps	:	GitLab, GitLab CI/CD, Kubernetes, Deployment Testing
Engineering	:	Backend Architecture, API Design, Multi-Tenant Systems, Distributed Workflows, Technical Leadership

Experience

Software Engineer — May 2025 – Present
Grafyn AI — *Remote*

- Designed and maintained production-grade **REST APIs in Java**, implementing validation, pagination, API versioning, standardized error handling, and stateless multi-customer request processing.
- Implemented **asynchronous and multithreaded processing** for long-running external API calls, keeping request threads non-blocking and improving backend responsiveness.
- Optimized **MySQL queries**, improving backend query performance by approximately **75%**, and integrated Snowflake and Databricks Query APIs into application workflows.
- Integrated **Pinecone and OpenSearch-backed APIs** into backend workflows for AI-driven search and retrieval capabilities.
- Developed **Python scripts for Agent Red Teaming and SDD workflows**, implementing the process end-to-end from automated execution and result generation through cloud storage and retrieval.
- Built the backend side of an **AI evaluation pipeline**, where Python-generated results were stored in cloud storage and subsequently fetched and processed through scheduled **Java jobs**.
- Managed **AWS S3, AWS Secrets Manager, Azure Key Vault, and Azure Blob Storage**; worked with GitLab CI/CD and DevOps on deployment testing, release validation, and Kubernetes operations.
- Led a **5-developer backend team**, prioritizing work and unblocking implementation issues; supported onboarding of **3 customers** and served as technical point of contact for ISO 27001 readiness.

Application Developer — May 2024 – Oct 2024
GR8 Designs — *Jamshedpur, Jharkhand*

- Developed and maintained responsive **mobile applications** primarily using **React Native**, building reusable components, application flows, forms, and interactive user interfaces.
- Implemented mobile application features using **React Native, React Hooks, component-based architecture, state management, API integration, and responsive UI patterns**, with emphasis on reusable and maintainable code.
- Integrated mobile applications with **REST APIs**, handling asynchronous requests, loading and error states, response validation, and dynamic data rendering.

- Contributed to backend development using **Node.js**, implementing supporting API endpoints, request handling, business logic, and database interactions for application features.
- Debugged frontend and backend issues across the application stack, identifying API, state-management, and integration problems and implementing fixes to improve application stability.
- Collaborated on feature development, testing, code reviews, and Git-based development workflows from implementation through release.

Projects

Relay – Reliable Webhook Delivery System *Java 21, Spring Boot, PostgreSQL, JDBC, Docker* GitHub

- Building a production-oriented webhook delivery platform using **Java 21, Spring Boot, and PostgreSQL**, designed around reliable event persistence, scheduled delivery, and REST APIs.
- Implemented persistent event and destination management using **PostgreSQL and JDBC**, avoiding in-memory queues so pending work survives application restarts.
- Designed failure-recovery workflows that identify pending events from persistent storage after application restart and resume delivery without relying on application memory.
- Implemented REST endpoints for destination management with validation, appropriate HTTP semantics, structured responses, and automated testing.
- Applying backend reliability patterns including **idempotency, retries, transaction boundaries, concurrency, and failure handling** as development progresses.

CHIP-8 Emulator *C++17, SDL2, Computer Architecture* GitHub

- Built a **CHIP-8 emulator in C++17 and SDL2**, implementing 34 of 35 standard opcodes, a 64×32 XOR-sprite display, 16-key input, and 60 Hz timers.
- Implemented the complete **fetch-decode-execute cycle**, CPU registers, memory addressing, stack operations, timers, keypad input, and graphics rendering.
- Validated emulator behavior against the **Timendus CHIP-8 test suite**, including opcode flags, quirks, stack behavior, sprite wrapping, clipping, and keypad handling.

MySQL Database Crawler *Java, Spring Boot, JDBC* GitHub

- Built a Java/Spring Boot application using **JDBC** to dynamically inspect MySQL database schemas, including tables, columns, relationships, and indexes.
- Implemented dynamic generation of **JPA-annotated model classes** from extracted schema metadata.
- Exposed REST APIs for database metadata inspection and automated model generation, combining backend API development with database introspection.

Education

Kalinga Institute of Industrial Technology Bhubaneswar, India
B.Tech, Computer Science *October 2021 – August 2025 | GPA: 8.51*

Certifications & Achievements

- **LeetCode:** Ranked among the top **8.5%** of users with a maximum rating of **1744**; maintained a **1100+ day streak**.
- **IBM Full Stack Software Developer** – Completed certification and developer assessment, April 2023.
- **CodeChampions – IET Ayodhya:** Ranked **14th out of 150+ participants**, September 2023.
